

~~-ABSTRACT-~~

## ABSTRACT OF THE DISCLOSURE

The invention relates to a network comprising a plurality of network nodes. At least part of the network nodes are directly intercoupled via at least one star node. The star node contains a plurality of star interfaces which are assigned to at least one network node. A star interface is provided for transferring a message from the assigned network node to the other star interfaces or from another star interface to at least one of the assigned network nodes always in dependence on a pilot signal.
